

# AGRU Conductive Cap Strip

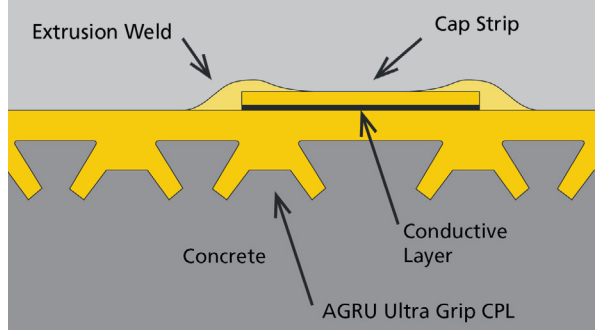

## SPARK TESTING MADE EASY

Conductive Cap Strips for AGRU-ULTRA GRIP® Concrete Protective Liner help streamline installation and simplify construction quality assurance by enhancing the ability to perform spark tests on welds with a single product.

Previously, installers needed to use a separate conductive material such as aluminium tape or copper wire behind the cap strip to properly perform a spark test on the welds. With Conductive Cap Strips, installers can save time and money during installation and construction quality assurance testing.

### Features

- Conductive Cap Strips are designed to work with Ultra Grip and are made with the same durable material
- Fully integrates a conductive layer to facilitate spark testing
- Available at standard widths of 4 or 6 inches with a thickness of 3 mm
- Custom widths are available to support unique installation needs.
